(approximately pavilion location in lower front center of photo)

ADDITIONAL INFORMATION:

21. (cont.) History and significance. Expand box as necessary, or add continuation pages.

The Sulpho Saline well was located at the north end of Main Street, but the water was piped and sold at two pavilions in town: this pavilion (known first as the "Sulpho-Saline Broadway Pavilion," later as Sulpho-Saline Pavilion No. 1") and the other in Elms Park. Its waters belonged to the *Saline & Sulphur laxative* group, and was one of four waters bottled by the Excelsior Springs Bottling Co. The sign of the Sulpho Saline was the "Three Owls", and its slogan was "We're out all night, Til broad daylight, But we drink SULPHO Saline in the morning." In a brochure published by the company, "The Famous Waters of Excelsior Springs Missouri," the list of its benefits are practically endless; however, it was primarily used as a laxative.

This lot was empty in the 1900 Sanborn map, but the pavilion is evident a few years later in the 1905 Sanborn. The first pavilion was wood frame; the rear portion had architectural features similar to the Elms Park Pavilion, but this one had an additional circular gazebo on the front along E. Broadway (see postcards below). It is listed in the 1908 Blue Book simply on "East Broadway," but in the 1908-09 City Directory, the address for this pavilion was 123 E. Broadway. It is listed as Sulpho-Saline Spring No. 1 in both the 1917 and 1922 City directories. In 1908, the city purchased the land around the Siloam Springs and hired landscape architect George Kessler to design an elaborate garden for the area and architect Henry Hoyt to design two classically inspired spring houses for the Siloam and Sulpho Saline. The existing pavilions continued to deteriorate over the next few years, though, and the city experienced a drop in visitors. The city finally passed bonds in 1922 and completed the two elaborate marble, terra cotta, and tile pavilions in 1923, although much of the remainder of Kessler's plans were never implemented. After only a decade only, during the Depression the city applied for a massive PWA project which brought ten various waters under city control. These waters were eventually piped into the elaborate Art Deco Hall of Waters building. The plans for the building were approved in 1935, and the front lawn for the building was located on the site of the 1920s pavilion (which was demolished). Sulpho-Saline was one of the ten waters that was piped into the Hall of Waters.

40. (cont.) Description of environment and outbuildings. Expand box as necessary, or add continuation pages.

On a 14.2 acre site containing the Hall of Waters (NRHP, 06/09/83) and part of Fishing River Linear Park. The Hall of Waters building is set back from E. Broadway and features a lowered large grassed lawn in front (north) with concrete sidewalks on the perimeter. There is a raised concrete walkway with ashlar limestone walls on the west side of the lawn, leading to a concrete patio in front of the building. This patio features terraces that step down to the lower grass lawn, and also has ashlar limestone walls. An oval drive on the west side has a center grassed area with concrete walkway. There are steps leading down to the rear (south) of the building, and a concrete patio extends around the rear portion of the T-wing. A raised levee separates the Hall of Waters from the Fishing River. Clay County parcel ID: 12-311-00-23-021.00.

41. (cont.) Further description of important architectural features. Expand box as necessary, or add continuation pages.

The Sulpho-Saline pavilion location was immediately adjacent to the sidewalk on the south side of E. Broadway, just south of Elizabeth Street. The side was extensively graded for the Hall of Waters sunken lawn; there are no extant remnants.
